Publication Summary

National Naloxone Programme Scotland – naloxone kits issued in 2012/13 (revision)

Publication date – 27th May 2014

About this Release
This is a revised version of the second annual release of monitoring information from the National Naloxone Programme in Scotland. This report presents data on the number of ‘take-home’ naloxone kits issued (in the community and by prisons prior to release) as part of the National Programme during 2012/13 (and comparisons with 2011/12). In order to assess the impact of naloxone distribution, numbers of opioid related deaths following prison release since the establishment of the National Programme are compared with 2006-2010 data. This revision augments 2011 performance data on numbers of opioid related deaths following prison release with comparable information for calendar year 2012.

Key Points

May 2014 Revision
- In 2012, a significant decrease in the percentage of opioid related deaths occurring within four weeks of prison release was observed (5.5%) compared to the 2006-10 Baseline Indicator (9.8%). Performance will continue to be monitored to ensure that the percentage in the post-Naloxone period is estimated with sufficient precision.

July 2013 Annual Report
- There were a total of 3,833 ‘take home’ naloxone kits issued in Scotland in 2012/13, through the National Naloxone Programme. This compares with 3,458 kits issued in 2011/12 (revised 2011/12 figures), an increase of 375 kits (10.8%). Note: these figures include kits issued in the community and kits issued to prisoners (at risk of opioid overdose), on their release from prison.
- There were 3,087 ‘take home’ naloxone kits issued in the community in Scotland in 2012/13, through the National Naloxone Programme. This compares with 2,743 ‘take home’ kits issued in the community in 2011/12, an increase of 344 kits (12.5%).
- The majority of kits issued in the community in 2012/13 (86.8%) were issued to individuals at risk of opioid overdose, 10.7% were supplied to service workers and 2.5% to family and friends (with the recorded consent of the person at risk).
- Of the 3,087 kits issued in the community in 2012/13, 80% were reported as a ‘first’ supply, 18.1% a ‘repeat’ supply and 1.8% ‘unknown’ if first or repeat supply. In 210 cases ‘repeat’ supply was reported as due to use of the previous kit on a person at risk.
There were 746 ‘take home’ naloxone kits issued by prisons in Scotland in 2012/13, all to persons at risk of opioid overdose, an increase of 31 kits (4.3%) on 2011/12. Note: kits are not issued ‘in prison’, rather they are supplied to the individual ‘on release’.

Of the 746 kits issued by prisons in 2012/13, 86.3% were reported as a ‘first’ supply, 10.6% a ‘repeat’ supply and 3.1% ‘unknown’ if first or repeat supply. In 10 cases ‘repeat’ supply was reported to be due to use of the previous kit on a person at risk.

In 2011, there was no significant decrease in the percentage of opioid related deaths within four weeks of prison release (8.4%) compared to the 2006-10 Baseline Indicator (9.8%).

Background
The monitoring analyses presented here provide vital evidence of the reach of the national ‘take home’ naloxone programme in Scotland. The Scottish Government commissioned the Information Services Division (ISD) of NHS National Services Scotland to report on the monitoring data, including using a national dataset (agreed with the National Naloxone Advisory Group) and a database set up at ISD.

Naloxone is an opioid antagonist which can temporarily reverse the effects of an opioid overdose, providing more time for emergency services to arrive and treatment to be given. ‘Take home’ naloxone is administered intramuscularly. The supply of a ‘take-home’ kit follows training on how to administer it safely and quickly.

Incremental rollout of community-based ‘take-home’ naloxone and associated data collection started in Scotland in April 2011. The supply of ‘take home’ naloxone by prisons was introduced, incrementally, from February 2011. By June 2011 all Scottish prisons (at that time) were participating in the programme. From 1st November 2011 responsibility for prisoner health care transferred from the Scottish Prison Service (SPS) to the NHS.

Further Information
Further information can be found in the Full Publication Report or on the ISD website.

About ISD
Scotland has some of the best health service data in the world combining high quality, consistency, national coverage and the ability to link data to allow patient based analysis and follow up. Information Services Division (ISD) is a business operating unit of NHS National Services Scotland - and has been in existence for over 40 years. We are an essential support service to NHSScotland and the Scottish Government Health Department and others, responsive to the needs of NHSScotland as the delivery of health and social care evolves.

Official Statistics
Information Services Division (ISD) is the principal and authoritative source of statistics on health and care services in Scotland. ISD is designated by legislation as a producer of ‘Official Statistics’. Our official statistics publications are produced to a high professional standard and comply with the Code of Practice for Official Statistics. The Code of Practice is produced and monitored by the UK Statistics Authority which is independent of Government. Under the Code of Practice, the format, content and timing of statistics publications are the responsibility of professional staff working within ISD.

Further information on ISD’s statistics, including compliance with the Code of Practice for Official Statistics, and on the UK Statistics Authority, is available on the ISD website.
